Bulk MUC Import

These are the user Instructions for import of multi-line MUC messages into the IULDUG E-UCR system. The LUC messages can be processed in a similar manner.

Those familiar with the legacy IULDUG system will recall that it had a transpose function whereby it was possible to paste into the system multiple MUC messages which are typically been copied from an in-house system.

The new system can now offer the same capability this document explains the process:

1. Select Transfer function from the main sidebar menu. The Transfer screen will open, the green button at top left will open the manual transaction entry screen but on the top right are 2 new buttons, MUC import in purple and LUC import in blue. Select the "MUC Import" button.
